Seasonal Changes

Spring Summer Autumn Winter

How do things change in Autumn?

The leaves on Deciduous trees change colour in the Autumn and fall off by winter.
Buds and blossoms regrow in Spring, and turn to green leaves in the summer.
This cycle repeats every year.

Evergreen trees stay green, and keep their leaves all year. The leaves on an evergreen tree are spiky like needles.

As the Earth tilts away from the sun, we get shorter days and longer nights. The weather is colder. The earths tilt is why we have seasons.
