# Plants

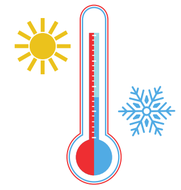

## Where does my food come from?

Sunlight: All plants need light from the sun to grow well. Some plants need lots of sunlight. Some plants only need a little sunlight

Temperature: How warm or cold something or somewhere is. Some plants like cooler temperatures and some warmer.

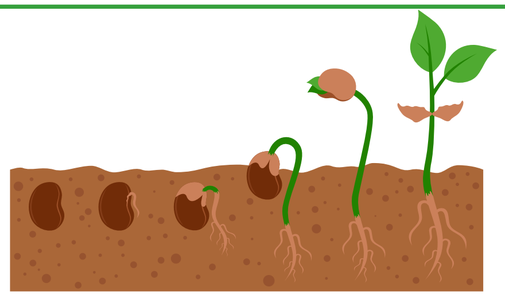

Water: All plants need water to grow. Without water, seeds and bulbs will not germinate.

Nutrition: Plants make their own food in their leaves using sunlight.

Germination: When the conditions are right, the seed soaks up water and swells, and the tiny new plant bursts out of its shell.

Shoot: A shoot grows upwards from the seed or to find sunlight.

Seed dispersal: When seeds move away from the parent plant. They can drop to the ground in the plant's fruit or be moved by the wind or animals.
